Disasters come in all shapes and sizes, from an accidentally deleted email to a complete server loss. But all disasters are unpredictable. GWAVA® Reload™ gives you the peace of mind knowing that your organization is prepared for any problem any time.

Push-button Recovery

With a click of a mouse, Reload fills in as the portion of your GroupWise system that has failed until the live GroupWise system is back online. It's that simple.

Built for Speed

Simply put, Reload is fast! One Reload customer with seven GroupWise post offices can back up those post offices 8 times faster than their prior solution. Plus, Reload has increased backup speeds over previous versions with the addition of simultaneous backup jobs. Because of Reload's rapid backup capabilities, you can perform intra-day backups of post office profiles - ensuring that critical messaging data is current. And because of Reload's unique design, no more than 12 percent of the total size of the post office is stored on disk each day, even if you are doing multiple daily backups.

End-user Self Service

With the "Auto-Reload" feature, users can easily retrieve accidentally deleted email messages, calendar items or attachments without any assistance from IT.

Enhanced Administration

The web interface for Reload encompasses all of the daily administration tasks such as health monitoring, available disk space and age of the profile. View useful statistical information such as backup run time and backup completion time and get one single consolidated daily report. In addition, Reload can send email notifications to multiple recipients to alert administrators when pre-configured thresholds have been exceeded.

Designed for GroupWise

Since Reload is built around and designed for GroupWise, it uses native application calls to ensure perfect backups of GroupWise. These backups are made across the network to the Reload server which dramatically reduces backup times and ensures reliability. For long term storage to tape, the off-line operation of Reload makes backup to tape quick and easy.

Reload backs up GroupWise post offices and domains on any platform that GroupWise runs on. Besides reliable backups and disaster recovery, Reload can migrate data back to a production server. It can even provide the means to migrate a post office from one platform to another—such as migrating from NetWare to Linux.

With Reload, there is no software to install to your GroupWise servers; all of the software is installed with the Reload package to the Reload server.

- ✓ Push-button Disaster Recovery
- ✓ Single Mailbox / Message Restore
- ✓ Small Backup Windows
- ✓ Fast and Intuitive Database Migration to Linux
- ✓ Easy-to-use Web Interface
- ✓ Up to Five Simultaneous Backup Jobs
- ✓ Availability of Weeks of Hot Backups
- ✓ Fully Compatible with GroupWise 8
- ✓ Fully Compatible with Retain 1.7
- ✓ No Software to Install to GroupWise Client or Server
- ✓ Off-site Storage for Remote Disaster Recovery Systems

System Requirements:

GroupWise 6.5 - 8.x

Reload Server Requirements

SUSE Linux Enterprise Server (SLES) Version 10 or 11, or OES2.

Disk Space - Reload as a backup solution does not require expensive or redundant disks. Storage space varies by the size of your post offices, the number of post offices maintained, and the number of days of hot backups that you would like available. A general guideline is to allow 2.5 times your post office size in storage for each week of backup that you want to keep.

For Automated Backup to Tape - A Linux-compliant tape backup solution is required.

About GWAVA

GWAVA is a worldwide leader in messaging security and archiving and the largest partner of its kind to Novell® GroupWise and Teaming in the world. GWAVA solutions are used by over 15 million users in 60 different countries. GWAVA security and audit solutions have been field-tested and proven in many large messaging infrastructures.
