

Life is
Short...
Data is
Forever.

Retain

for BlackBerry Enterprise Server

BlackBerry Smartphone

Retain for BlackBerry Enterprise Server allows organizations to take advantage of mobile freedom without the risk of data loss or being unprepared for litigation or compliance audits.

Instant access to archived and real-time data for:

- Legal
- HR Personnel
- Information Security Officers
- Compliance Officers
- Forensic Auditors

Read and archive SMS/PIN and phone usage data without any software on the device.

BlackBerry SMS/PIN Messaging Archival and Auditing

Every day, thousands of SMS/PIN messages flow in and out of your organization. Instant communication for nearly every department. Driving business forward as a competitive advantage. Regardless of the size of your organization or type of industry, understanding, preserving and having ready access to company information contained in these text messages is necessary and, in the event of litigation or a compliance audit, vital. What's more is that this same valuable data, unless secured can move easily from disgruntled employee to your competition.

The Retain Solution

Retain for BlackBerry Enterprise Server enables productivity gains for the entire organization without sacrificing security and advantage in case of litigation or compliance audit.

Built specifically for the BlackBerry Enterprise Server, Retain from GWAVA offers complete and seamless archiving of SMS and PIN messages and phone usage data. Unlike other archiving products, Retain requires no software to be loaded on the Smartphone - dramatically easing the IT support and maintenance burden. In addition, Retain offers powerful audit and administration features that allow administrators to specify which smartphone users' they are allowed to audit. Access to sensitive accounts can be limited to key personnel with appropriate security clearance. Of course all activities are logged and included in a detailed audit trail.

Finding a particular message is easy. Search criteria may be based upon key words, dates, date ranges and predefined regular expressions such as "Social Security Numbers." Search results are retrieved from the BlackBerry Enterprise Server SQL archive and can be exported to Microsoft Excel, Adobe pdf and MS-XPS formats.

All of the reasons your organization chose to archive email apply to the retention of text messages. Retain integrates with Zantaz, Assentor, EVault and any email archiving solution that supports SMTP. Retain converts each text message into an individual piece of email, so all of your archived data can be stored in a single repository.

The second generation of Retain also supports all email platforms.

The Retain Solution

- ✓ Retain for BlackBerry Enterprise Server enables both mobile freedom and is a critical component to a data loss prevention strategy
- ✓ No software is installed or maintained on the device
- ✓ Precise audit trail and reporting showing exactly which messages were reviewed and by whom
- ✓ Supports all major email systems (Microsoft Exchange, IBM/Lotus Notes, Novell GroupWise)
- ✓ Live Confidential Message Inspection
- ✓ Flexible user rights management
- ✓ Granular forensic tools
- ✓ Easy deployment. Minimal changes to network infrastructure and hardware

System Requirements - Server

- BlackBerry Enterprise Server 4.1 or later, MS SQL Server 2000, or 2005 Compatible
- 512MB RAM
- 2 GB Hard Drive Space
