Disasters come in all shapes and sizes, from an accidentally deleted email to a complete server loss. The one thing they share is that they are unpredictable. GWAVA Reload is no crystal ball, but being prepared provides your business with the protection it deserves.

### Push Button Recovery

With a click of a mouse, Reload fills in as the portion of your GroupWise system that has failed until the live GroupWise system is back online. It's that simple.

### Built for Speed

Simply put, Reload is fast! A current Reload customer with seven GroupWise post offices can now back them up 8 times faster than their prior solution and 60% faster than previous versions of Reload. Reload has increased backup speeds over previous versions with the addition of simultaneous backup jobs.

### Small Back Up Windows

With the dramatic increase in performance, it is now possible for customers to do "intra-day backups" of post office profiles - ensuring that critical messaging data is the most current. And because of Reload's unique design, no more than 12 percent of the total size of the post office is stored on disk, even if doing multiple daily backups.

### End-user Self Service

If the Reload administrator chooses to enable "Auto-Reload", Reload can provide users the ability to easily retrieve accidentally deleted email messages or attachments without having to expend valuable IT resources.

### Enhanced Administration

The web interface for Reload 3 has been enhanced to encompass all of the daily administration tasks such as health monitoring, available disk space and age of the profile. Useful statistical information is also available such as backup run time, and backup completion time. Reload can send one single consolidated daily report. In addition, email notifications can be sent to multiple recipients to alert administrators when pre-configured thresholds have been exceeded.

### Built for Speed

As the largest Novell GroupWise partner, GWAVA works closely with Engineering, Quality Assurance and Support to ensure Reload is compatible and fully tested with the latest version of GroupWise.

- ✓ Push Button Disaster Recovery
- ✓ Single Mailbox / Message Restore
  - ✓ Smaller Backup Windows
  - ✓ Enhanced Web Interface
  - ✓ Up to Five Simultaneous Backup Jobs
  - ✓ Weeks of Hot Backups available
  - ✓ Fully Compatible with GroupWise 8
  - ✓ Fully Compatible with Retain 1.6
  - ✓ No software to install to GroupWise client or server
  - ✓ Off-site storage for remote Disaster Recovery Systems

### **System Requirements:**

GroupWise 6.5- 7.x

### **Reload Server Requirements**

SUSE Linux Enterprise Server (SLES) Version 9 or 10, or OES Linux 1 GB RAM.

### **Disk Space:**

Reload as a backup solution does not require expensive or redundant disks. Storage space varies by the size of your Post Offices, the number of Post Offices maintained, and the number of days of Hot Backups that you would like available. A general guide-line is that 2.5X your Post Office size is needed in storage for each week of backup.

**For Automated Backup to Tape** - A Linux compliant Tape Backup solution is required.

### **About GWAVA Inc.**

GWAVA is a worldwide leader in messaging security. With over 15 Million people using our solutions in over 60 different countries, GWAVA's security and auditing software has been field proven in some of the world's largest messaging infrastructures.
